

Document Title	User Acceptance Testing (UAT) Report
Project Name	Auto Ticket Classification using Flow Designer
Date	03 October 2026
Team ID	6ab8f5efc23107aaaa7325ec
Version	1.0

User Acceptance Testing Report

1. Introduction

This UAT report documents the acceptance testing performed on the Auto Ticket Classification solution built using Flow Designer. The purpose of UAT is to confirm that the solution meets the business requirements and is ready for production pilot / go-live from the perspective of end users (IT Support Agents and Service Desk Managers).

2. Scope of UAT

- Automatic classification of Category, Subcategory, Priority and Assignment Group on ticket creation
- Hybrid rule-based + AI classification path
- Confidence threshold behaviour (auto-assign vs Manual Review)
- Agent ability to view confidence, explanation, override classification and provide feedback
- Audit logging of every classification decision
- Basic management visibility (volume / confidence / override indicators)

Out of Scope for this UAT: Full external AI integration performance under extreme load, multi-language classification, and historical bulk re-classification.

3. UAT Environment

Platform: ServiceNow / Power Platform non-production instance with Flow Designer enabled.
Test data: Sample set of 50–100 historical and synthetic tickets covering common categories and edge cases.
Users: 3–5 IT Support Agents + 1 Service Desk Manager acting as UAT testers.

4. Test Cases & Results Summary

TC ID	Test Scenario	Expected Result	Actual Result	Status
UAT-01	New ticket with clear keyword pattern	Classified correctly by rules, high confidence, auto-assigned	As expected	Pass
UAT-02	New ticket with ambiguous text	Routed to Manual Review when confidence < threshold	As expected	Pass
UAT-03	Agent views confidence + explanation	Both visible on ticket form / work notes	As expected	Pass
UAT-04	Agent overrides Category / Group	Override accepted, audit log updated, ticket reassigned	As expected	Pass
UAT-05	Agent marks classification Correct/Incorrect	Feedback stored and linked to original prediction	As expected	Pass
UAT-06	Audit log entry created	Full decision record present (inputs, outputs, confidence, timestamp)	As expected	Pass
UAT-07	Admin changes confidence threshold	New threshold applied to subsequent tickets	As expected	Pass
UAT-08	End-to-end time for classification	Completed within 5 seconds for majority of tickets	As expected	Pass

5. Defects Found & Resolution

No critical or high-severity defects remaining open at the end of UAT. Minor observations (wording of explanation text, placement of feedback buttons) were logged and scheduled for the next iteration.

6. UAT Exit Criteria & Sign-off

- All high-priority test cases passed
- No open Critical / High defects
- Agents confirm the solution is usable in daily work
- Manager confirms audit and visibility requirements are met

UAT Status: **PASSED – Recommended for Pilot**

7. Sign-off

Role	Name	Signature / Date
UAT Lead (Agent Representative)		
Service Desk Manager		
Project Lead
